

Art Rage Us

Mary K. DeShazer

Art.Rage.Us. ,1998-05 In a unique collaboration, The Breast Cancer Fund, the American Cancer Society, and the Susan G. Komen Breast Cancer Foundation invited artists and writers across the nation who had faced breast cancer to submit their work. The result is Art.Rage.Us., a riveting book of art, fiction, poetry, and prose, and a bold testimony to the courage of women who face the disease. At turns stirring, humorous, heartrending, introspective, stark, and defiant, the pieces in Art.Rage.Us. have the power to comfort, provoke, and transform. For each of the 75 artists, the impulse to transform her experience of breast cancer through creative expression was an integral part of the search for healing. Together their work forms a inspiring statement about the healing power of art.

Staring Rosemarie Garland-Thomson,2009-04-17 Drawing on examples from art, media, fashion, history and memoir, cultural critic Rosemarie Garland-Thomson tackles a basic human interaction which has remained curiously unexplored, the human stare. In the first book of its kind, Garland-Thomson defines staring, explores the factors that motivate it, and considers the targets and the effects of the stare. While borrowing from psychology and biology to help explain why the impulse to stare is so powerful, she also enlarges and complicates these formulations with examples from the realm of imaginative culture. Featuring over forty illustrations, Staring captures the stimulating combination of symbolic, material and emotional factors that make staring so irresistible while endeavoring to shift the usual response to staring, shame, into an engaged self-consideration. Elegant and provocative, this unique study advances new ways of thinking about visuality and the body that will appeal to readers who are interested in the overlap between the humanities and human behaviors.

Mammography and Beyond National Research Council,Division on Earth and Life Studies,Institute of Medicine,National Cancer Policy Board,Committee on Technologies for the Early Detection of Breast Cancer,2001-07-23 Each year more than 180,000 new cases of breast cancer are diagnosed in women in the U.S. If cancer is detected when small and local, treatment options are less dangerous, intrusive, and costly-and more likely to lead to a cure. Yet those simple facts belie the complexity of developing and disseminating acceptable techniques for breast cancer diagnosis. Even the most exciting new technologies remain clouded with uncertainty. Mammography and Beyond provides a comprehensive and up-to-date perspective on the state of breast cancer screening and diagnosis and recommends steps for developing the most reliable breast cancer detection methods possible. This book reviews the dramatic expansion of breast cancer awareness and screening, examining

the capabilities and limitations of current and emerging technologies for breast cancer detection and their effectiveness at actually reducing deaths. The committee discusses issues including national policy toward breast cancer detection, roles of public and private agencies, problems in determining the success of a technique, availability of detection methods to specific populations of women, women's experience during the detection process, cost-benefit analyses, and more. Examining current practices and specifying research and other needs, *Mammography and Beyond* will be an indispensable resource to policy makers, public health officials, medical practitioners, researchers, women's health advocates, and concerned women and their families.

Feminisms Redux Diane Price Herndl, 2009

Breast Cancer Answers Judith King, 2004 Breast cancer answers practical tips, and personal advice from a survivor.

Gender in Applied Communication Contexts Patrice M. Buzzanell, Helen Sterk, Lynn H. Turner, 2004 *Gender in Applied Communication Contexts* explores the intersection and integration of feminist theory as applied to four important areas: organizational communication, health communication, family communication, and instructional communication. This collection of readings links theoretical insights and contributions to pragmatic ways of improving the lives of women and men in a variety of professional and personal situations. *Gender in Applied Communication Contexts* is recommended for upper-division and graduate-level courses in gender and communication, feminist theory, organizational communication, health communication, instructional communication, and applied communication. This anthology is also recommended as a research resource for scholars in Women's Studies, Family Studies, and Business and Management.

The Cancer Plot Reginald Wiebe, Dorothy Woodman, 2024-04-05 In *The Cancer Plot*, Reginald Wiebe and Dorothy Woodman examine the striking presence of cancer in Marvel comics. Engaging comics studies, medical humanities, and graphic medicine, they explore this disease in four case studies: Captain Marvel, Spider-Man, Thor, and Deadpool. Cancer, the authors argue, troubles the binaries of good and evil because it is the ultimate nemesis within a genre replete with magic, mutants, and multiverses. They draw from gender theory, disability studies, and cultural theory to demonstrate how cancer in comics enables an examination of power and responsibility, key terms in Marvel's superhero universe. As the only full-length study on cancer in the Marvel universe, *The Cancer Plot* is an appealing and original work that will be of interest to scholars across the humanities, particularly those working in the health humanities, cultural theory, and literature, as well as avid comics readers.

From Pink to Green Barbara L. Ley, 2009 The breast cancer movement has emphasized the importance of reducing or eliminating exposure to chemicals and toxins. The movement's disease prevention philosophy is chronicled from the beginning.

Triumphs of the Human Spirit Barry W. Summers, 2001-12-03 Whether you have cancer or someone you love and care

about does, here are 48 powerful stories from cancer survivors who prove that it is what you do with the cancer that matters so much more than what the cancer does to you. Grab it with determination and know that a diagnosis of cancer does not define who you are and that you are not alone.

The Biopolitics of Breast Cancer Maren Klawiter, 2008 For nearly forty years, feminists and patient activists have argued that medicine is a deeply individualizing and depoliticizing institution. According to this view, medical practices are incidental to people's transformation from patients to patient activists. The *Biopolitics of Breast Cancer* turns this understanding upside down. Maren Klawiter analyzes the evolution of the breast cancer movement to show the broad social impact of how diseases come to be medically managed and publicly administered. Examining surgical procedures, adjuvant therapies, early detection campaigns, and the rise in discourses of risk, Klawiter demonstrates that these practices created a change in the social relations-if not the mortality rate-of breast cancer that initially inhibited, but later enabled, collective action. Her research focuses on the emergence and development of new forms of activism that range from grassroots patient empowerment to environmental activism and corporate-funded breast cancer awareness. The *Biopolitics of Breast Cancer* opens a window onto a larger set of changes currently transforming medically advanced societies and ultimately challenges our understanding of the origins, politics, and future of the breast cancer movement. Maren Klawiter holds a PhD in sociology from the University of California, Berkeley. She is currently pursuing a law degree at Yale University.

Emotions Monica Greco, Paul Stenner, 2013-10-31 Are emotions becoming more conspicuous in contemporary life? Are

the social sciences undergoing an 'affective turn'? This Reader gathers influential and contemporary work in the study of emotion and affective life from across the range of the social sciences. Drawing on both theoretical and empirical research, the collection offers a sense of the diversity of perspectives that have emerged over the last thirty years from a variety of intellectual traditions. Its wide span and trans-disciplinary character is designed to capture the increasing significance of the study of affect and emotion for the social sciences, and to give a sense of how this is played out in the context of specific areas of interest. The volume is divided into four main parts: universals and particulars of affect embodying affect political economies of affect affect, power and justice. Each main part comprises three sections dedicated to substantive themes, including emotions, history and civilization; emotions and culture; emotions selfhood and identity; emotions and the media; emotions and politics; emotions, space and place, with a final section dedicated to themes of compassion, hate and terror. Each of the twelve sections begins with an editorial introduction that contextualizes the readings and highlights points of comparison across the volume. Cross-national in content, the collection provides an introduction to the key debates, concepts and modes of approach that have been developed by social scientist for the study of emotion and affective life.

Biomedicalization Adele E. Clarke, Laura Mamo, Jennifer Ruth Fosket, Jennifer R. Fishman, Janet K. Shim, 2010-08-31 The rise of Western scientific medicine fully established the medical sector of the U.S. political economy by the end of the Second World War, the first "social transformation of American medicine." Then, in an ongoing process called medicalization, the jurisdiction of medicine began expanding, redefining certain areas once deemed moral, social, or legal problems (such as alcoholism, drug addiction, and obesity) as medical problems. The editors of this important collection argue that since the mid-1980s, dramatic, and especially technoscientific, changes in the constitution, organization, and practices of contemporary biomedicine have coalesced into biomedicalization, the second major transformation of American medicine. This volume offers in-depth analyses and case studies along with the groundbreaking essay in which the editors first elaborated their theory of biomedicalization. Contributors. Mammographies Mary K. DeShazer, 2013-06-10 While breast cancer continues to affect the lives of millions,

contemporary writers and artists have responded to the ravages of the disease in creative expression. Mary K. DeShazer's book looks specifically at breast cancer memoirs and photographic narratives, a category she refers to as mammographies, signifying both the imaging technology by which most Western women discover they have this disease and the documentary imperatives that drive their written and visual accounts of it. Mammographies argues that breast cancer narratives of the past ten years differ from their predecessors in their bold address of previously neglected topics such as the link between cancer and environmental carcinogens, the ethics and efficacy of genetic testing and prophylactic mastectomy, and the shifting politics of prosthesis and reconstruction. Mammographies is distinctive among studies of contemporary illness narratives in its exclusive focus on breast cancer, its analysis of both memoirs and photographic texts, its attention to hybrid and collaborative narratives, and its emphasis on ecological, genetic, transnational, queer, and anti-pink discourses. DeShazer's methodology—best characterized as literary critical, feminist, and interdisciplinary—includes detailed interpretation of the narrative strategies, thematic contours, and visual imagery of a wide range of contemporary breast cancer memoirs and photographic anthologies. The author explores the ways in which the narratives constitute a distinctive testimonial and memorial tradition, a claim supported by close readings and theoretical analysis that demonstrates how these narratives question hegemonic cultural discourses, empower reader-viewers as empathic witnesses, and provide communal sites for mourning, resisting, and remembering.

Disability Studies Sharon L. Snyder, Brenda Jo Brueggemann, Rosemarie Garland-Thomson, 2022-11-01 Images of disability pervade language and literature, yet disability is, as the volume's introduction notes, the ubiquitous unspoken topic in contemporary culture. The twenty-five essays in Disability Studies provide perspectives on disabled people and on disability in the humanities, art, the media, medicine, psychology, the academy, and society. Edited and introduced by Sharon L. Snyder, Brenda Jo Brueggemann, and Rosemarie Garland-Thomson and containing an afterword by Michael Bérubé (author of *Life As We Know It*), the volume is rich in its cast of characters (including John Bulwer, Teresa de Cartagena, Audre Lorde, Oliver Sacks, Samuel Johnson, Mark Twain, Walt Whitman); in its powerful, authentic accounts of disabled conditions (deafness, blindness, MS, cancer, the absence of limbs); in its different settings (ancient Greece, medieval Spain, Nazi Germany, the modern United States); and in its mix of the intellectual and the emotional, of subtle theory and plainspoken autobiography.

Subjectivity João Biehl, Byron J. Good, Arthur Kleinman, 2007-04-11 This innovative volume is an extended intellectual conversation about the ways personal lives are being undone and remade today. Examining the ethnography of the modern subject, this preeminent group of scholars probes the continuity and diversity of modes of personhood across a range of Western and non-Western societies. Contributors consider what happens to individual subjectivity when stable or imagined environments such as nations and communities are transformed or displaced by free trade economics, terrorism, and war;

how new information and medical technologies reshape the relation one has to oneself; and which forms of subjectivity and life possibilities are produced against a world in pieces. The transdisciplinary conversation includes anthropologists, historians of science, psychologists, a literary critic, a philosopher, physicians, and an economist. The authors touch on how we think and write about contingency, human agency, and ethics today.

Nineteenth-Century Interiors Clive Edwards, 2023-12-05 This volume of primary source materials documents the spatial layouts of the nineteenth century home as they often became more precisely planned with rooms for specific purposes being developed. The styles began to truly reflect the owner's taste and position. The range is of course vast from single room dwellings to large-scale mansions and numerous variations in-between. Accompanied by extensive editorial commentary, this collection will be of great interest to students and scholars of art history.
