**Managing Climate Risk in the U.S. Financial System** Leonardo Martinez-Diaz, Jesse M. Keenan, 2020-09-09 This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious emerging risks to the U.S. financial system, and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data and tools to better monitor, analyze, and quantify climate risks. It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible, open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive—it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations, in the form of new financial products, services, and technologies, can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition. <https://doi.org/10.5281/zenodo.5247742>

**The Structuring of Organizations** Henry Mintzberg,2009 Synthesizes the empirical literature on organizational structuring to answer the question of how organizations structure themselves --how they resolve needed coordination and division of labor. Organizational structuring is defined as the sum total of the ways in which an organization divides and coordinates its labor into distinct tasks. Further analysis of the research literature is needed in order to build a conceptual framework that will fill in the significant gap left by not connecting a description of structure to its context: how an organization actually functions. The results of the synthesis are five basic configurations (the Simple Structure, the Machine Bureaucracy, the Professional Bureaucracy, the Divisionalized Form, and the Adhocracy) that serve as the fundamental elements of structure in an organization. Five basic parts of the contemporary organization (the operating core, the strategic apex, the middle line, the technostructure, and the support staff), and five theories of how it

functions(i.e., as a system characterized by formal authority, regulated flows, informal communication, work constellations, and ad hoc decision processes) are theorized. Organizations function in complex and varying ways, due to differing flows - including flows of authority, work material, information, and decision processes. These flows depend on the age, size, and environment of the organization; additionally, technology plays a key role because of its importance in structuring the operating core. Finally, design parameters are described - based on the above five basic parts and five theories - that are used as a means of coordination and division of labor in designing organizational structures, in order to establish stable patterns of behavior.(CJC).
