Zero Zero Zero Roberto Saviano, 2015-07-02 NOW A MAJOR SKY ATLANTIC SERIES From the international bestselling author of Gomorrah, this searing exposé reveals how dirty money and the drug trade are at the heart of our lives, our economy, and our world In many countries, 'zero zero' or double zero flour is the finest, best flour on the market. Among narco-traffickers, then, 'zero zero zero' is the nickname for the very purest, highest quality grade of cocaine. From Mexican cartels to Milanese financiers, Guatemalan mercenaries to Ukrainian warlords, Calabrian traffickers to the traders in Wall Street and London who wash the money clean, this is an unforgettable story that goes around the globe and through every level of society to show the extent to which the drug trade affects us all. Weaving together stories, interviews, wiretaps and his own experience of the criminal underworld, Saviano reveals an international narco-state, which, in the wake of the financial crisis, is now the pillar of our global economy. It is the perfect synthesis of modern capitalism, where everything is for the taking - and all is consumed, ruined and destroyed.

From the Molecular World Alan J. Roche,2012-01-21 Hermann Kopp (1817-1892) is best remembered today as a historian of chemistry, but during his lifetime he was one of the most eminent chemists of his day, and one of the earliest pioneers of physical chemistry. Late in his career he wrote an endearing fantasy about personified molecules. Published in 1882, *Aus der Molecular-Welt* (From the Molecular World) portrayed the intimate details of what might actually be happening in the sub-microscopic world; the atoms and molecules we meet there have agency, personalities, sometimes even dialog. Filled with appealing tropes, humor, and whimsical asides, Kopp's short book provided an examination of the chemistry and physics of his day that was always light-hearted on the surface, but often surprisingly profound. Properly interpreted, the book provides a revealing tour of nineteenth-century debates concerning chemical theory. It is here translated into English, richly annotated, and equipped with an illuminating preface by a leading historian of chemistry. It provides entertaining reading to practicing chemists, as well as new insights to historians of science.

European Drug Policies Renaud Colson, Henri Bergeron,2017-01-27 The drug control regime established by the international community has not succeeded in curbing either the demand for, or the offer of, narcotics. But, despite a series of developments in the Americas - including the legalisation of cannabis in Uruguay and in several states in the United States of America - there is still little support in Europe for repealing drug-prohibition laws. Nevertheless, a gradual policy convergence reveals the emergence of a European model favouring public-health strategies over a strictly penal approach to

combatting drugs, while growing transnational support for legalisation indicates the persistence of an alternative paradigm for drug policy. This book examines the various influences on drug policies in Europe, as grassroots movements, NGO networks, private foundations and academic research centres increasingly confront the prevailing discourses of drug prohibition. Pursuing an interdisciplinary approach and bringing together legal scholars, social scientists and practitioners, it provides a comprehensive and critical assessment of drug policy reform in Europe.

Handbook of Alien Species in Europe Delivering Alien Invasive Species,2008-11-14 Biological invasions by alien (non-native) species are widely recognized as a significant component of human-caused global environmental change and the second most important cause of biodiversity decline. Alien species threaten many European ecosystems and have serious environmental, economic and health impacts. The DAISIE (Delivering Alien Invasive Species Inventories for Europe) project has now brought together all available information on alien species in Europe (terrestrial, aquatic and marine) and from all taxa (fungi, plants, animals). Thus for the first time, an overview and assessment of biological invasions in the Pan-European region is finally possible. The Handbook of Alien Species in Europe summarises the major findings of this groundbreaking research and addresses the invasion trends, pathways, and both economic as well as ecological impact for eight major taxonomic groups. Approximately 11.000 alien species recorded in Europe are listed, and fact sheets for 100 of the most invasive alien species are included, each with a distribution map and colour illustration. The book is complemented by a regularly updated internet database providing free additional information. With its highly interdisciplinary approach, DAISIE and its Handbook will be the basis for future scientific investigations as well as management and control of alien invasive species in Europe.
